Dear Hopewell Parents/Guardians,

Today, the school district was notified by a parent that one of our 9th grade students at the high school is presumed to be positive for COVID19. “Presumed positive” means that, even without a COVID test, an individual is showing COVID symptoms and has been exposed to an individual who tested positive for COVID. The student was last in our building on Thursday, October 22, 2020. The District has determined that there are no close contacts to identify within the school district.

At this time, I would encourage families to monitor their children’s health each day. If your child has any symptoms that could potentially be COVID, please keep them home and contact your medical provider. If someone in your family has been tested or is showing symptoms of COVID, please consider keeping your family at home until you receive the test results. This is also a reminder for all of us to continue to wash hands and wear a facial covering.

Please know that we are making every effort to keep the Hopewell Area School District students safe and to mitigate the risk of contracting COVID19.

With Viking PRIDE-

Dr. Michelle Miller
Superintendent
