OLYMPIC MEDALS

The Winter Olympics have recently ended. If you hosted a mini- Winter Olympics and invited the following countries: Germany, France, Switzerland, Russia, Canada, and the United States. There will be eight sporting events: downhill racing, ski jumping, figure skating, speed skating, bobsledding, luge, freestyle snowboarding, and curling.

There will be a total of 24 medals given out. 3 medals for each sporting event will be awarded (1-gold, 1-silver, 1-bronze).

Your job is to determine which countries **should** get medals in which events so that **all** of the medals are given out resulting in three winners for each event. Each country must win **at least** two medals. Remember to show all of your work so that it is organized. Include a chart or graph in your detailed explanation to illustrate your findings. Good luck!
